

# Crash Data Retrieval

AFTER THE CRASH, THE FACTS  
ARE NO ACCIDENT.

In serious property damage or injury it is crucial to be able to access empirical facts about the moments just preceding and during the impact. Aiding attorneys and accident victims in the retrieval of such critical information is the fact that many late model vehicles store this data on an Event Data Recorder (EDR). However extracting this invaluable form of Electronically Stored Information (ESI) is extremely difficult and there are few tools recognized as being equal to the task.

OPTiMO Digital Forensics employs the only commercially available Crash Data Retrieval System (CDR System). These tools provide access to critical data recorded in the EDR, located in the airbag control module (ACM) and/or powertrain control module (PCM). This vital form of ESI, extracted by uniquely talented professionals, displays crash information in tables giving empirical data that illustrates an unbiased, factual analysis of any accident.

With its highly skilled Digital Forensics analysts employing cutting edge EDR recovery tools, OPTiMO Digital Forensics is your source for removing the second-guessing and circumstantial theorizing that can follow most accidents.
